

DLFB30-R

Infrared linear detector
from 3m to 30m

Description

Linear smoke detector with infrared barrier from 3m to 30m, with built-in laser pointer, and automatic self-calibration. It has been designed to ensure a simple and safe commissioning procedure, which does not necessarily require tools and at the same time it is fast, minimizing the number of movements of commissioning personnel between the detector and the reflector. Available as a relay, the detector can be connected to any type of panel. Its technology allows coverage area of 3 to 30 meters long and up to 15 meters wide.

Applications

The reference is ideal for any type of installation, and especially for very discreet areas such as museums, theatres, cinemas and retail.

Features

Main features: Length coverage from 3m to 30m Coverage width from 12m to 15m depending on the installation height according to UNE23007_14 Self-powered stand-alone laser pointer Auto calibration Embedded option. Color customization option. Industrial version option: IP66.

Technical Features

CONNECTION

Directly to conventional zone or conventional zone module, without 24v auxiliary power supply.
